Capacities of these various vehicle versions range from 3,000 to 33,000 lbs. All trucks are built in an ISO 9001 certified facility.

Doosan Infracore America is the fastest growing forklift and lift truck company in the North American market, thanks to its exceptional level of product performance and their consistently high level of consumer support and service given to all Doosan Infracore Lift Truck clients. The U.S. lift Truck division stationed in Cleveland has a expert team knowledgeable in Sales, Purchasing, Advertising, Logistical and Technical Support.

Korea's initial domestic lift truck marketplace was an open-import enterprise. In the 1960's, Korea Machinery Co. Ltd. begun to import assembled lift trucks as part of a nationwide machinery expansion project. Early sales of this industrial equipment focused on large business communities, the armed services and on state-run companies. This ultimately led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun trade operations throughout Korea to service and sell this heavy equipment. By 1978, a lift truck manufacturing plant was successfully completed. Continuous technical education became the new focus for enhancing quality and product development.

Home-based lift truck business for Daewoo started in 1967 and grew to an astonishing 90% market share in Korea. By the 1980's, Daewoo's advanced technological enhancements combined with sales success placed them in a situation of significant expansion of their forklift operations.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a cooperative enterprise project to counter act competitive pressures in the US materials handling industry. This plan radically expanded Daewoo's lift truck sales. Construction was completed in 1984 to facilitate a modern plant which helped set up the company for the fabrication of high end added-value goods suitable for export. In 1993, the corporation had a global sales system and started exporting designs they had developed through in-house technology, as an independent product. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion possibilities into international marketplaces.
